

Paving construction – renovation of Güterstrasse Stampfi + 2024, Grossdietwil

Grossdietwil · 2024

SERVICE AREA

General civil engineering and road construction, road drainage, pavement construction

PROJECT OVERVIEW

The renovation of the Stampfi + freight roads was an extensive project that is intended to significantly improve both driving safety and the longevity of the road. By creating new drainage measures and renovating the existing. The drainage system has been optimized. In addition, the existing pavement was partially renewed, while most of the road was renovated with spatulas and the application of a new surface. These measures now ensure better absorption of traffic loads and make a significant contribution to traffic safety. Despite the challenging narrow road conditions and a tight schedule, the project was successfully implemented, which prepares the Stampfi + freight roads for the future.
