

Paving construction – renovation of Rohrmattstrasse Willisau

Willisau · 2024

SERVICE AREA

General civil engineering and road construction, road drainage and paving construction

PROJECT OVERVIEW

The renovation of Rohrmattstrasse Willisau was an extensive project that is intended to significantly improve both driving safety and the longevity of the road. By creating new drainage measures and renovating the existing. The drainage system has been optimized. In addition, the existing pavement was partially renewed, while most of the road was renovated with spatulas and the application of a new surface. These measures now ensure better absorption of traffic loads and make a significant contribution to traffic safety. Despite the challenging narrow road conditions, the high volume of through traffic and a tight schedule, the project was successfully implemented, which prepares Rohrmattstrasse Willisau for the future.
